

Appendix A

Compressed Gas Cylinder Plan Compliance Checklist

The following checklist is intended to provide a quick reference for an individual school district to evaluate their level of compliance with OSHA's Compressed Gases standard (29 CFR 1910.101).

- Inventory of compressed gas types and locations of use in each facility.
- Hazard analysis review for each gas and applications involved.
- Obtain regulators, safety devices.
- Establish storage room (area).
- Train employees.

Note: This checklist is not intended to be comprehensive in nature. Each school district should refer to their respective Compressed Gas Cylinder Plan which further outlines general compliance requirements.
